IS394	Healthcare Informatics	60	

Catalog Description

This course is designed to provide students with an opportunity to apply knowledge and skills from information science and computer science to the health care field. Emphasis is on developing a basic understanding of how automation is used to manage information in health care. Topics covered include types of information systems used in health care, how to select and implement information systems, current developments in health care information systems, and issues surrounding computers in health care. In this course the focus is on the computer as a tool for helping health care providers do their work
